Dear sir/Madam

SUBMISSION ON THE ELECTRONIC COMMUNICATIONS AMENDMENT BILL
(B31-2018).

I second the proposed amendments. However the bill must include the means to deal with cyber crime which happens mostly in banks where people's bank accounts get hacked and their money disappears. The bill must include the empowerment of the financial intelligence centre to access every electronic transactions happening in all banks and be able to trace the location of the device making the transaction and the user. This will help curb cyber crime that is rife in the banking sector through electronic communication. The electronic system must be made to request the personal details and names and identity numbers of the user before allowing him/her to use the electronic money transfer system. The system must be linked with the department of home affairs system to check-

- if the names and details are authentic and also
use a finger print scan or photo. That is my
submission.

Hope you find this to be in order.

Yours faithfully

Elcort Natalia
