

MIN Mobile submission for IMT800

MIN Mobile is a new future leading mobile network operator which its main aim is to provide with the most affordable and unbeatable mobile services mainly data services as we all know that mobile data services are expensive here in South Africa.

We want to ensure that everyone in South Africa can afford data so they can also be connected through the internet and also be familiar with the digital and internet world to keep up with the technology even in the dis-advanced areas (Rural Areas) where we will also put our main focus on so we solve their coverage problem which has been there for over 26 years now.

We would like to bid for IMT800 to be able to facilitate and provide with our affordable mobile services to the people of South Africa as we understand that the highest percentage of the population is unemployed which means the majority of the population do not afford mobile services mostly data because it is very expensive which also prevents South Africa from quickly growing in technology.

This is the reason why MIN Mobile will be selling our data with the lowest price rates to ensure even the unemployed can afford the internet which will also help them learn new things and start their own businesses and help solve the high rate of unemployment in South Africa by learning new things on the internet. We will ensure this by selling our 1GB 30 days data for only R5.00, which is something that even a student can afford.

With the IMT800 we will be able to provide with not just the mobile services but with the highest speed data connection to both working and non-working classes.
